***** Document Purpose and Audience:

• What is this document?

This document to explain what the Book Network software is and its purpose & Scope

And Show the importance operation that the user do in book network and how the system deal with it.

- List the target audience to read this document (e.g. CEO? Project Manager? Customer...?)
 - Project Manager
 - Teacher Assistant

***** Introduction

Book Network

The software is for virtual reading club that help you to know more about your favorite authors and books and share it with your friends.

o **Purpose**

It provides following facilities to user:

- 1. See which books your friends are reading.
- 2. Track the books you're reading, have read, and want to read.
- 3. Check out your personalized book recommendations. It recommendation engine analyzes data to give suggestions tailored to your literary tastes.
- 4. Can rate books and know which good one
- 5. Add books manually if it's not in the public list
- 6. Open discussions about books

o Scope

This website is an online library that you can browse and see the book shelves of your friends and rate it. Also you can view the books you want to read or the ones you have already read and share them with your friends.

o <u>Definitions</u>, <u>acronyms</u>, <u>and abbreviations</u>

There is no definitions or acronyms or abbreviations in this docoument.

* Requirements

o Functional Requirements:

- 1. **Register an account**: By this feature user will be able to create a personal account.
- 2. **Sign-In**: This Feature enables the pre-registered user to log- in his account.
- 3. **Following a user**: This feature facilitate following other users to get their activities shown in the newsfeed.
- 4. **Newsfeed Browsing**: Here, a logged in user will be able to trace the progress of his own followed users as well as the new added books by the others users or by the system itself.
- 5. **Profile Browsing :** By this feature user will be able to track down his latest progress such as "on-progress book s , newest Reviewing groups status"
- 6. **Constructing a shelf**: This feature is mainly for classifying the books a user read, hence, the user can make up to 3 shelves for 3 different book's categories.
- 7. **Books Browsing:** By this feature user will be able to search for a book by many attributes such as (title, category, Author)
- 8. **Sharing a book:** User here can contribute a book manually with a full description of its content in case the system is not offering that book.
- 9. **Adding a book**: This feature enables the user to add a book to a specified and pre-created personal shelf for various facilities as (Labeling the book's status, Ranking, Initiating or joining the book's reviewing group)
- 10. **Labeling a book's status:** User here will be able to link one label to a book such as (Done, in progress) to be tracked by his own profile.
- 11. **Ranking a book:** Here, User will be able to give (1 to 5) rank for a book according to his own vision.

- 12.**Join a reviewing group:** By this feature user will be able to create /Join a reviewing group for the books already done on his shelf.
- 13. **Adding an opinion:** This feature enables the user to add posts to the pre-created or joined review groups.

o Non Functional requirement

- Security/Privacy -> protection website and data from hacker.
- Download Time-> to save time when download books.
- Stability ->protection website from dropping.
- Legal -> There may be legal issues involving privacy of information, intellectual property rights.
- Accuracy -> Requirements about the accuracy of the data.
- Modifiability -> Requirements about the effort required to make changes in the software.
- Portability -> The effort required to move the software to a different target platform
